Skilled With: Tailwind, NPM, Ant Design, MaterialUI, Bootstrap, Git, Figma, Postman, BASH, ChartJS, JIRA, Netlify, Github, AWS.

Work History

Inncretech

Princeton, NJ

Programmer, Front End Development

September 2020 - Present

- As a front end software engineer I worked with a team on various small and large scale projects. The projects ranged from websites to larger web apps written with javascript in Angular or React. The projects my team and I worked on have been used by thousands of people and are very reliable.
- I gained experience in the management side of work by mentoring newer developers and helping them get started on current projects.

Vorsi

Hudson Valley, NY

Intern Programmer, Front End Development

May 2019 - August 2019

- Vorsi is an enterprise resource planning software for businesses that has many services which help them run efficiently. While I was there I worked with another developer and under his leadership I learned how to work on large scale applications.

Relevant Experience

Computer Science Tutor

Lincroft, NJ

Brookdale CC

January 2017- January 2018

- Tutored students at the community college in data structures, Java programming, and SQL.

Projects

Term Grid

- This web app is a software used by large companies that are in the process of buying/merging other companies and has been used in billion dollar deals.
- My team recreated the application in React from Angular and improved features / designs to create a better application for users.

Sew Honey Store

- This project was created to assist a friend in selling her home made swimwear online. I had an admin console to help her add / update/ remove products from her store and the actual ecommerce website. The site is not in use anymore but it was very helpful for her to grow her business.
